EDUCATION

SRM University AP

Amaravati, Andhra Pradesh, India

B.Tech. Computer Science and Engineering (AI/ML Specialization)

Jul, 2024 - May, 2028

- Cumulative GPA: 8.8/10 (Till 4th semester)

WORK EXPERIENCE

Software Development Intern | Purple Beans Agro Industries

Jun 2026 - Jul 2026

- Built and shipped a full-stack e-commerce platform (purple-beans.vercel.app) for a live client during a 2-month internship, using Next.js 15, Supabase, and Prisma with a custom cinematic design system.
- Integrated Razorpay for secure payment processing and implemented inventory and order tracking.
- Built polished, animated UI/UX using GSAP, Framer Motion, and Lenis for smooth-scroll interactions.
- Used AI-assisted scaffolding (Antigravity) to speed up development and debugged multiple production build issues.

Intern | UniConverge Pvt Ltd

Feb 2026 - Mar 2026

- Developed a Java-based Banking Management System using OOPs principles.
- Worked on data processing and ML fundamentals.
- Implemented core banking features like deposits, withdrawal, balance management.
- Documented workflows for structured development.

PROJECTS

Turofan RUL Prediction | Machine Learning

[\[LINK TO PROJECT\]](#)

- Predicted turbofan engine Remaining Useful Life (RUL) using the NASA C-MAPSS dataset (FD001-FD004).
- Built baseline Random Forest and improved HistGradientBoosting models with RMSE/MAE comparison.
- Built a complete, reproducible training and evaluation pipeline with EDA and performance visualizations.

Cyberlytics-AI | AI-based Cybersecurity Simulation

[\[LINK TO PROJECT\]](#)

- Built a real-world OpenEnv-based environment simulating how cybersecurity teams respond to threats.
- Designed a reinforcement learning environment for modelling attack-defence strategy.
- Simulates Security Operations Center (SOC) workflows for training intelligent agents.

ASTRA (powered by AIPOS) | Agentic AI Productivity Operating System

[\[LINK TO PROJECT\]](#)

- Built an agentic AI productivity platform using Next.js, FastAPI, and LangGraph, unifying conversational AI, RAG-based document intelligence, memory, and multi-agent workflows in one workspace.
- Implemented a RAG pipeline for PDF ingestion, retrieval, and summarization using ChromaDB vector storage with sentence-transformer embeddings.
- Designed a multi-agent orchestration layer with pluggable LLM providers (OpenAI, Gemini, Grok, local Ollama) and persistent memory, task, and notes modules.

Certi-Trust | Blockchain Certificate Verification System

[\[LINK TO PROJECT\]](#)

- Built a blockchain-based system for secure, tamper-proof credential verification.
- Implemented smart contracts enabling decentralised and trust-less validation.

SKILLS

Programming Languages: Proficient: C, C++, Python, JavaScript, JavaFamiliar: TypeScript

AI / ML: scikit-learn, Pandas, NumPy, Random Forest, HistGradientBoosting, Reinforcement Learning (OpenEnv), RAG, LangGraph, ChromaDB, Sentence-Transformers, LLM APIs (OpenAI, Gemini, Grok, Ollama)

Technologies / Tools: Proficient: Node.js, React, Next.js, Git, GitHub, MongoDB, VS CodeFamiliar: FastAPI, Supabase, Prisma, Razorpay, Solidity, GSAP, Framer Motion

Competencies: Data Structures & Algorithms (160+ LeetCode problems), Object-Oriented Programming (OOP), Full-Stack Development, Machine Learning, API Development, Database Management Systems (DBMS), Problem Solving

ACHIEVEMENTS

- Qualified for **Round 1 of Google The Big Code 2026**, ranking among the **top 15,000 participants** nationwide
- Secured **4th position** in a **Blockchain Hackathon** organized at SRM University AP, demonstrating strong problem-solving and Web3 development skills
- Earned **MongoDB Certified Associate Developer** certification, validating proficiency in NoSQL databases and backend development
